

Cooperative European Medicines Development Course

www.cemdc.eu

The need to provide high-quality and cost-effective medication for mankind living in various countries led to the intensive globalization of the research and manufacturing of medicines. The global need for properly educated professionals with a broad education covering all aspects of medicine development can be primarily provided by highly complex life-long continuous professional training.

Unfortunately countries with smaller populations and/or small size pharmaceutical industry cannot provide and maintain this education cost-effectively for a prolonged time. For covering their needs the **Cooperative European Medicines Development Course (CEMDC)** was organized with the participation of 10 regional universities. The PharmaTrain harmonized European course program is used for the teaching.

Partner Universities

Estonia, Tartu

Hungary, Budapest

Lithuania, Kaunas

Poland, Warsaw

Portugal, Lisbon

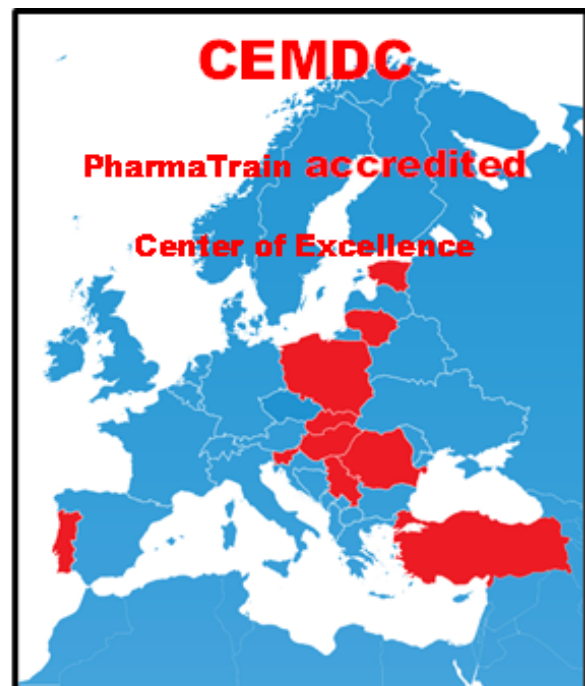

Romania, Targu Mures

Serbia, Belgrade

Slovakia, Bratislava

Slovenia, Ljubljana

Turkey, Ankara

The aim of the course scientifically accredited by PharmaTrain and IFAPP is to train experts who understand the complex process of medicines development from molecule to health care and who can apply this knowledge working in large or small, innovative or generic pharmaceutical companies, small and medium sized enterprises, regulatory agencies as well as in health care and health insurance management. The course material was carefully compiled by academic and industry experts to meet the needs of both the pharmaceutical industry and health care.

The training is given in English. Students can apply with medical, pharmaceutical, MSc or equivalent degrees in natural and life sciences. A satisfactory English knowledge is needed to follow the program. The course is open for students of all nationalities.

Cooperative European Medicines
Development Course

The deadline for registration is March 15, 2013.

Please support this effort to train highly qualified experts for the development of better medicines by giving them some free time and, if possible, economic assistance to follow the course. A limited number of fellowships are made available for the period 2013-14 by the PharmaTrain.
